Organic Fruits and vegetables

- we export and supply organic fruits and vegetables.
- Organic foods often have more beneficial nutrients,
- Organic produce contains fewer pesticides. Chemicals such as fungicides, herbicides, and insecticides are widely used in conventional agriculture and residues remain on (and in) the food we eat.
- Organic food is often fresher because it doesn't contain preservatives that make it last longer. Organic produce is often (but not always, so watch where it is from) produced on smaller farms near where it is sold.
- Organic farming is better for the environment. Organic farming practices reduce pollution, conserve water, reduce soil erosion, increase soil fertility, and use less energy. Farming without pesticides is also better for nearby birds and animals as well as people who live close to farms.
- It Tastes Better
- Safe from Scary Chemicals
- Safe from Dangerous Pesticides
- **Peace of Mind: Knowing your buying organic food can help you to enjoy what you eat**
